

GKB VCollector

Do you want to effectively combat weeds or a greasy top layer, without the use of pesticides? And at the same time prevent the emergence of stubborn annual meadow grass? Scarifying your sports field with a professional machine is the solution for sustainable management of your sports fields. The machine is suitable for scarifying golf courses, football fields, sports fields and cricket fields. The Vcollector is a scarifier specially developed to leave the processed surface as clean as possible and to follow the contours of the field.

The VCollector is optimally equipped for removing weeds thanks to the CombiRotor. This is a powered rotor developed for scarifying and milling. The rotor rotates against the direction of travel, so that it makes a powerful cutting movement and does not skip a centimeter. With the VCollector, the blades are mounted with wind vanes. This creates an airflow that sucks the milled material into the collection container.

- Working speed up to 12 km/h. For example, you can cut a field horizontally and vertically in about 1.5 hours.
- Solid build quality, making the machine last a lifetime.
- Easy to attach to common tractors, via three-point attachment
